

Risk Factors, Disclaimers and Legal Notices

(DRAFT)

To-be-determined or -updated, marked with [texts] in yellow background

Participation in the BGH Program, usage of the BGH Platform, and/or holding, earning, unlocking, transferring, or interacting with Green Hero Coin (GHC) may involve significant risks. Prospective participants should carefully consider the following risk factors, in addition to any other information contained in this White Paper.

This Section is not intended to be exhaustive, and additional risks may exist that are not currently known or anticipated.

Section X. Risk Factors

X.1 Regulatory and Legal Risk

Digital assets, token-based programs, and blockchain-enabled platforms are subject to evolving laws and regulatory interpretations across jurisdictions. Regulatory requirements may change rapidly and may affect:

- token issuance and distribution models
- KYC/AML requirements
- platform access eligibility
- taxation treatment
- restrictions on token trading or transferability

BGH may be required to modify or suspend certain features, restrict users in certain jurisdictions, or discontinue token-related functions to remain compliant.

X.2 KYC, Compliance, and Restricted Jurisdiction Risk

BGH may require KYC identity verification and/or additional compliance measures depending on applicable laws, jurisdiction, and platform features. Users may be denied access to certain functionality if:

- KYC requirements cannot be completed,
- the user is a Restricted Person, or
- the user is located in a restricted jurisdiction.

This may affect a user's ability to access, use, unlock, transfer, or participate in token-related mechanisms.

X.3 Blockchain and Smart Contract Risk

If BGH functionality depends on blockchain networks and/or smart contracts, the system may be exposed to:

- smart contract vulnerabilities or coding errors
- network congestion, outages, or chain forks
- unexpected protocol changes
- malicious attacks (e.g., exploits, MEV-style manipulation, etc.)

BGH does not guarantee that blockchain systems or smart contracts will be free of defects, vulnerabilities, or interruptions.

X.4 Cybersecurity and Unauthorized Access Risk

Despite best-effort security controls, cyber incidents may occur, including:

- phishing, scams, or impersonation attacks
- credential theft
- malware or compromised user devices
- breaches affecting third-party providers
- internal operational mistakes

Users are responsible for maintaining safe wallet and account practices. Loss of private keys, seed phrases, or credentials may result in irreversible loss of access to digital assets.

X.5 Token Value and Market Risk

GHC, including Market Coin (MC) family assets where applicable, may experience significant volatility within market environments. Token value may fluctuate due to:

- user demand changes
- market speculation
- broader crypto market conditions
- regulatory announcements
- liquidity conditions or exchange availability (if any)

BGH makes no representations regarding token price performance, market value, liquidity, or long-term sustainability.

X.6 Liquidity and Transferability Risk

Even if Market Coin (MC) family assets are designed to be transferable under applicable protocol rules, users may face constraints such as:

- limited market participants
- exchange listing risk (if any)
- trading halts, delistings, or restrictions
- jurisdictional limitations or compliance holds

There is no guarantee that any market will exist or continue to exist for trading or exchange of GHC.

X.7 Tokenomics and Emission/Release Risk

Token distribution schedules, Mining systems, unlocking policies, and Treasury operations may impact the economics of the ecosystem. Risks may include:

- user misunderstanding of Locked vs Unlocked balances
- unintended incentives or behavioral outcomes
- supply concentration risk
- governance decisions that alter program mechanics

Tokenomics may be updated through governance or operational decisions, subject to applicable rules.

Visual identity classifications (including UC family and MC family logos) do not alter the underlying protocol mechanics and must not be interpreted as guarantees of issuance, conversion, or release timing.

X.8 Governance Risk

Governance decisions may result in outcomes that differ from a specific participant's preferences, including decisions related to:

- content inclusion and platform direction
- changes in reward mechanisms
- treasury management and MC Release
- eligibility rules or compliance requirements

BGH governance may be influenced by participation rate, voting participation levels, or token distribution patterns.

X.9 Operational and Execution Risk

BGH is subject to operational challenges, including:

- staffing limitations
- infrastructure limitations
- vendor or third-party dependency
- delays in development or deployment
- changes in strategic priorities

The BGH Program and Platform may evolve and may not develop as initially planned.

X.10 Educational Content and Information Risk

BGH aims to provide science-based educational materials and engagement. However, users acknowledge that:

- information may evolve as science develops
- different institutions may publish conflicting interpretations

- content selection may not satisfy every user's expectations

BGH does not guarantee completeness, accuracy, or universal acceptance of any educational materials.

X.11 Force Majeure and External Disruptions

BGH operations may be impacted by events beyond reasonable control, including:

- natural disasters and extreme weather
- power, internet, or infrastructure failures
- war, sanctions, or political disruptions
- public health emergencies

Such disruptions may reduce platform availability or affect token operations.

Section Y. Disclaimers and Legal Notices

This Section is provided for clarity and risk disclosure and is intended to align with conventional industry practices for token-related publications.

Y.1 Informational Purposes Only

This White Paper is provided solely for informational and educational purposes. It may describe proposed features, models, token mechanics, and future objectives, which may change at any time.

Y.2 No Offer, No Solicitation

Nothing in this White Paper constitutes:

- an offer to sell, or
- a solicitation of an offer to purchase

any securities, financial instruments, investment products, or regulated instruments in any jurisdiction.

Y.3 No Investment Advice

This White Paper does not constitute financial, investment, legal, tax, or trading advice. Users should consult qualified professionals before making any decisions involving digital assets or compliance obligations.

Y.4 No Guarantees or Promises

BGH makes no representations or warranties regarding:

- token price appreciation
- profitability
- revenue or returns
- market liquidity
- future exchange listings
- continuous platform operation

- that any Ecosystem Coin Identity representation implies independent market tradability or financial status

Participation in the BGH ecosystem is undertaken at the participant's own risk.

Y.5 No Warranty

The BGH Program, BGH Platform, and any associated token-related systems are provided on an “as is” and “as available” basis, to the extent permitted by law. BGH disclaims all warranties, express or implied, including fitness for a particular purpose and non-infringement.

Y.6 Limitation of Liability

To the maximum extent permitted by law, BGH and its organizers, contributors, and affiliates shall not be liable for losses arising from:

- token value changes
- user errors (including lost keys or incorrect transfers)
- system outages or platform unavailability
- cybersecurity incidents
- compliance restrictions or KYC outcomes
- changes to tokenomics or governance decisions

Users acknowledge that digital assets may involve irreversible transactions and high risk.

Y.7 Forward-Looking Statements

This White Paper may contain forward-looking statements regarding BGH's plans, expectations, goals, timelines, and potential future developments. Such statements are inherently uncertain and may differ materially from actual outcomes due to internal or external risks, including those described in the Risk Factors section.

Y.8 Changes to the White Paper

BGH may update, revise, or amend this White Paper at any time. Any such revisions may be published through official BGH channels and may apply to the program going forward.

Y.9 Visual Identity and Token Classification Clarification

BGH utilizes multiple visual identity layers for structural clarity within its documentation and ecosystem interfaces, including:

- Token-Optimized Identity (market and blockchain-facing representation)
- Ecosystem Coin Identity (learning and governance representation)
- Coin classification logos (UC family and MC family designations)

Visual coin classifications and ecosystem coin representations do not constitute separate tradable tokens unless expressly designated in official BGH protocol documentation.

The presence of a circular coin-style logo, classification label, or internal ecosystem representation does not independently create a security, financial instrument, investment product, or tradable asset.

Only the Token-Optimized Identity represents the canonical blockchain-based token where applicable.

Participants must not interpret visual representations as implying liquidity, market status, exchange listing, or regulatory classification unless formally stated in official BGH documentation.

Document Control

Tier 2 (Legal Authority) Document

This document forms part of the official BE GREEN HEROES (BGH) documentation framework.

Interpretation and application shall remain consistent with Tier-1 documentation where applicable.
